## 1, System Block Diagram

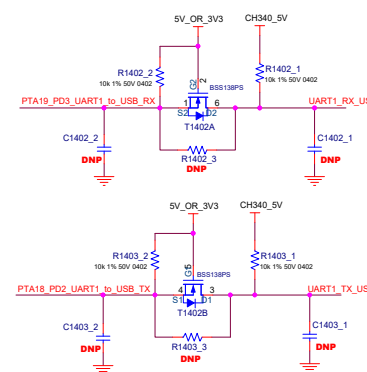

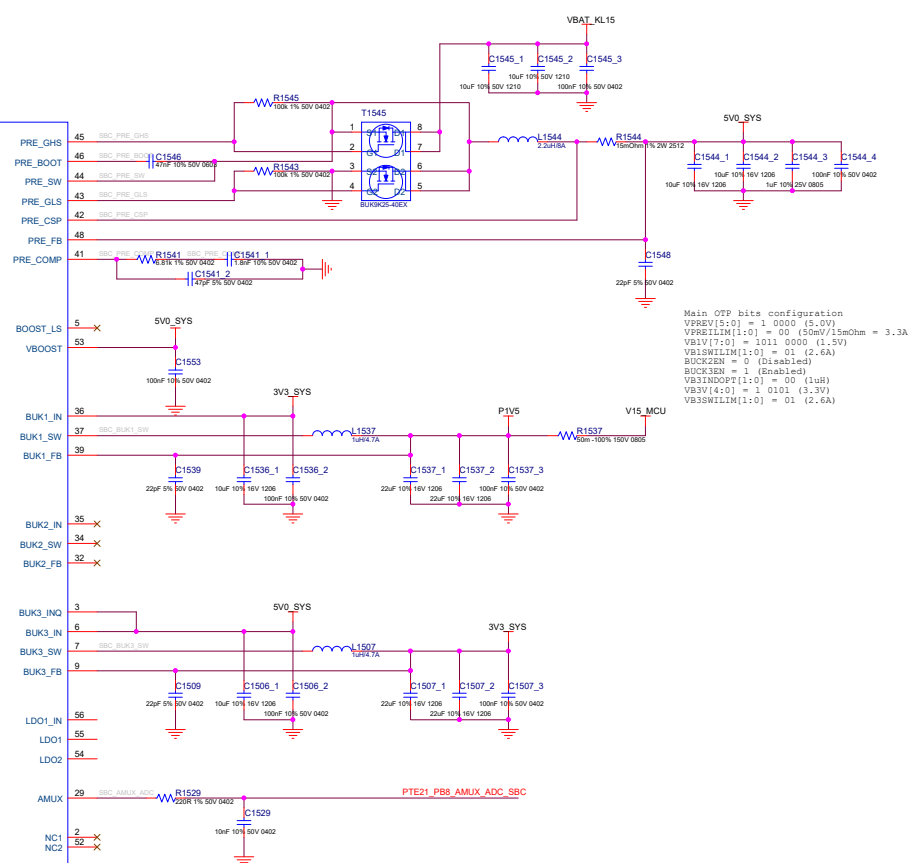

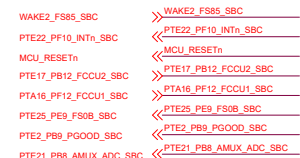

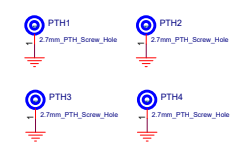

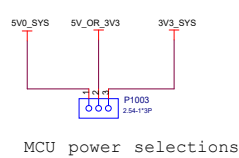

Note1: The entire power system can either from SBC or describe Power IC, only either one will be mount.  
 Note2: Dotted line means alternative path. e.g. MCU V15 can either from DC-DC or NPN-LDO, only either one will be mount.  
 Note3: Current consumption depend on devices.

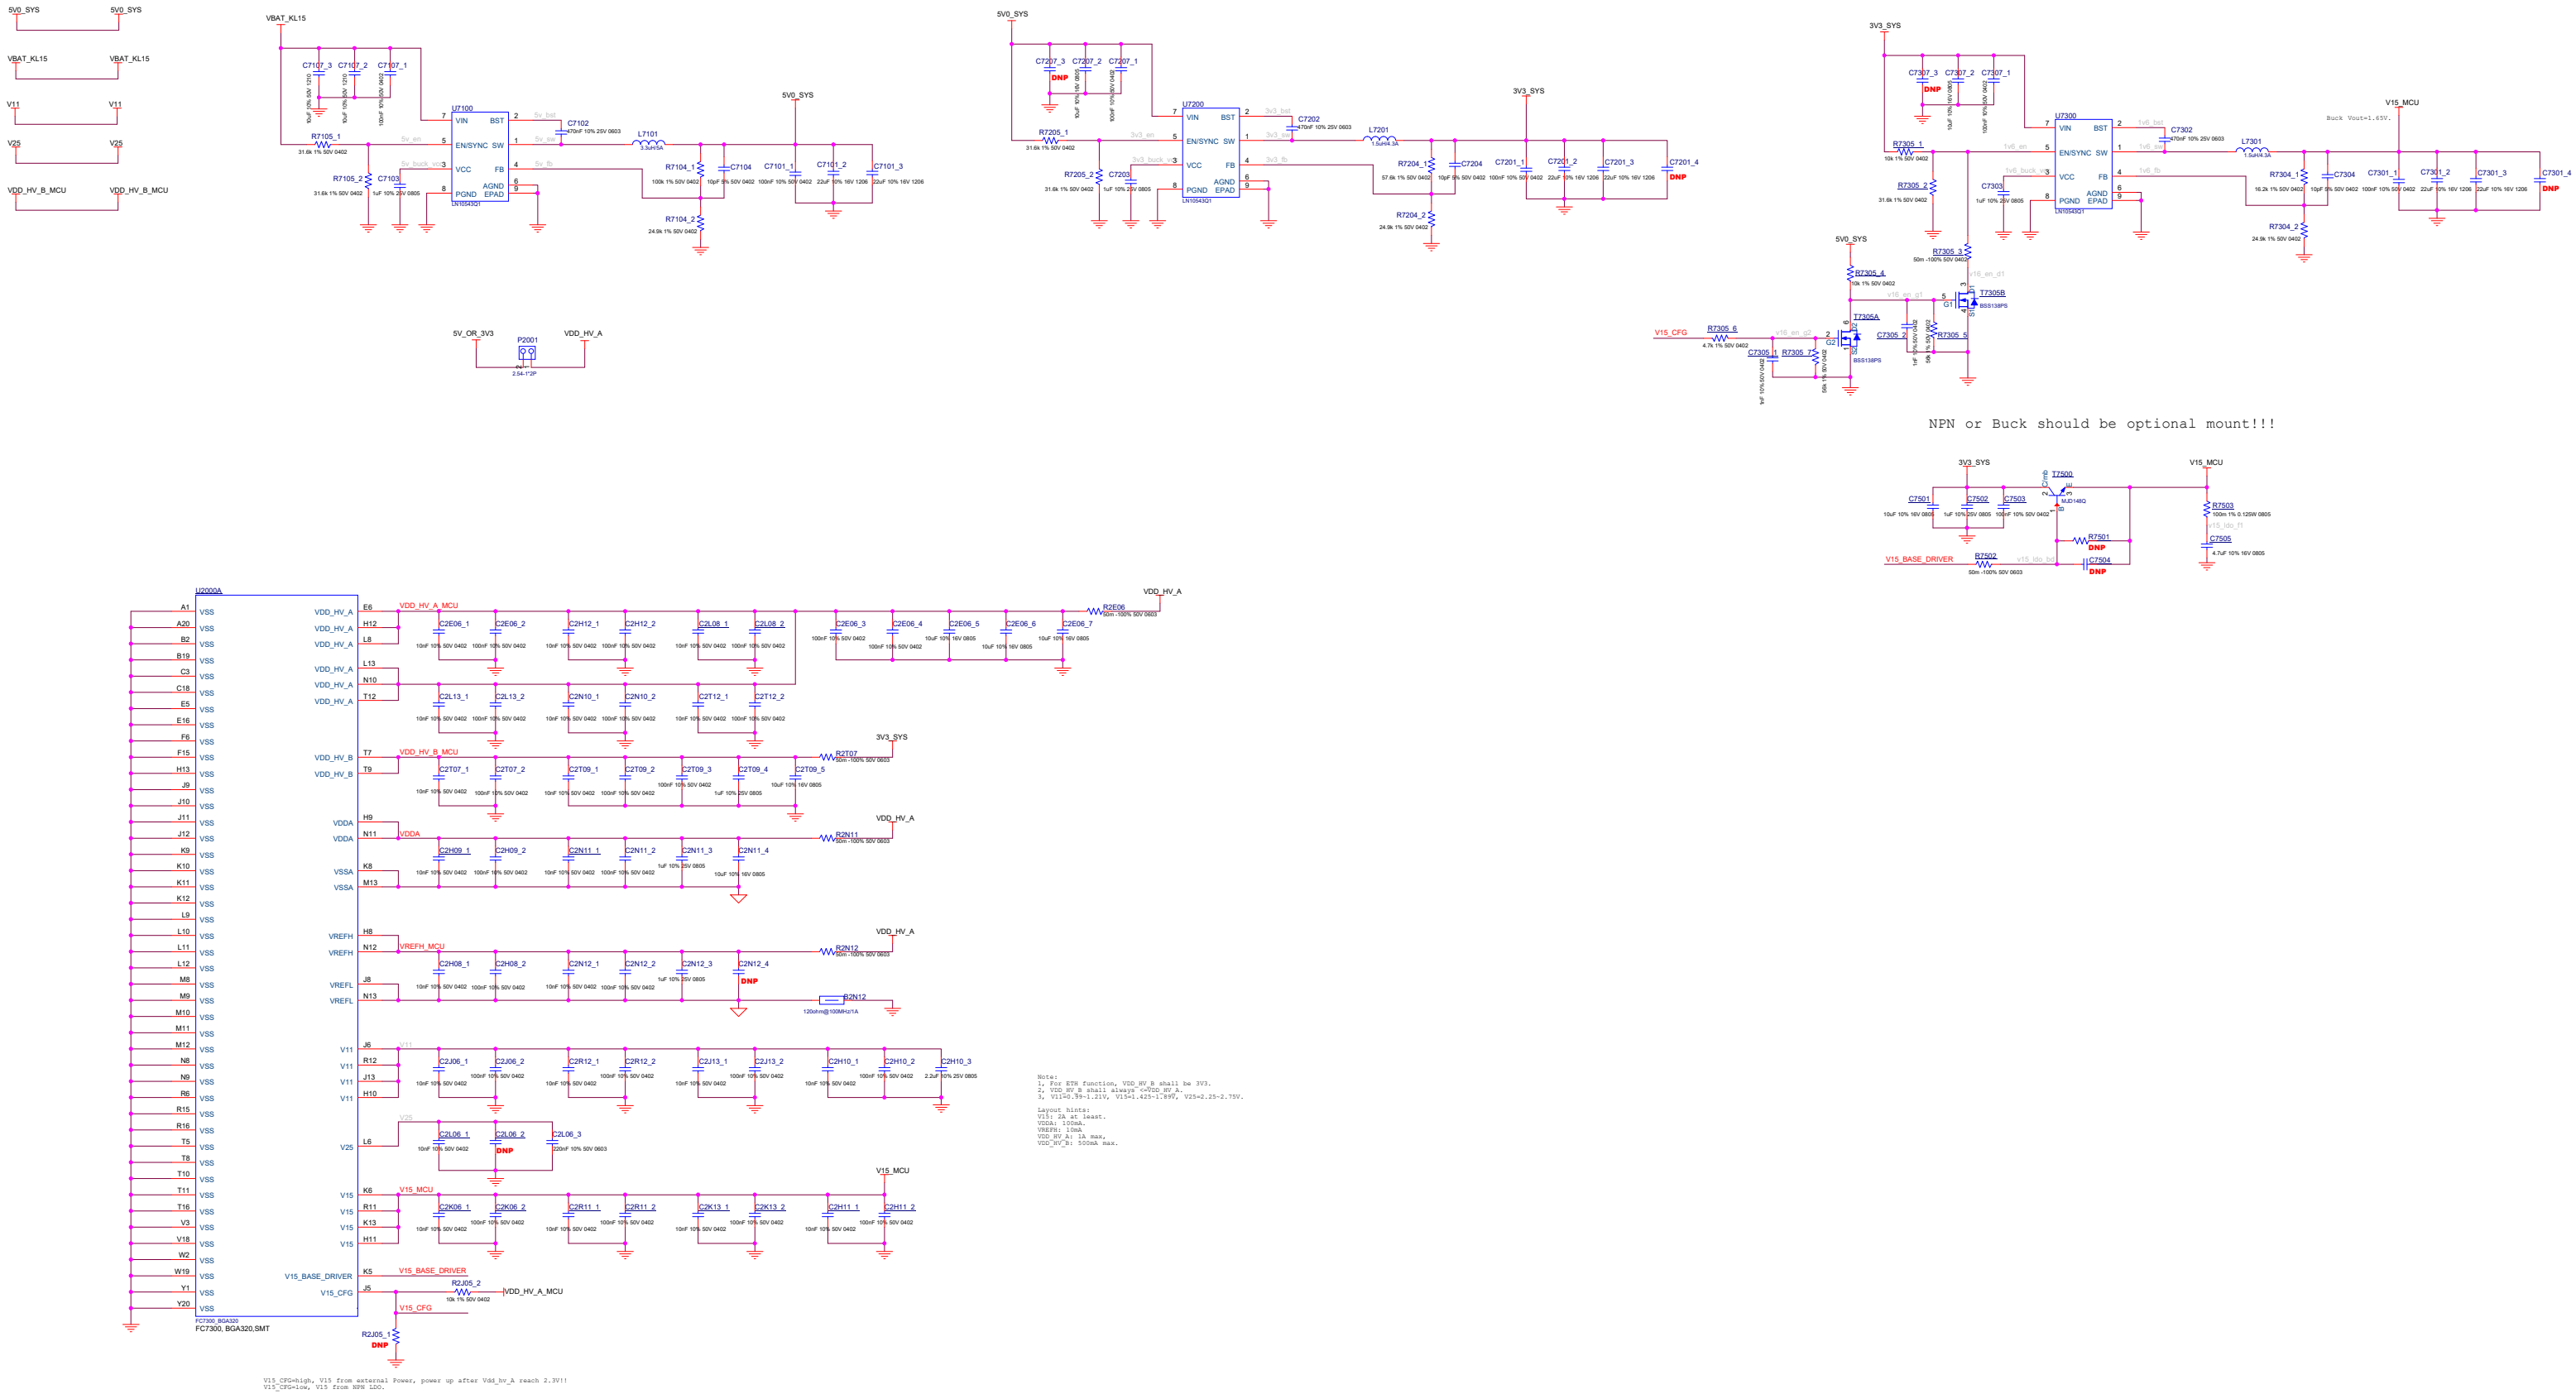

## 2, Power Flow Chart

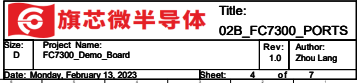

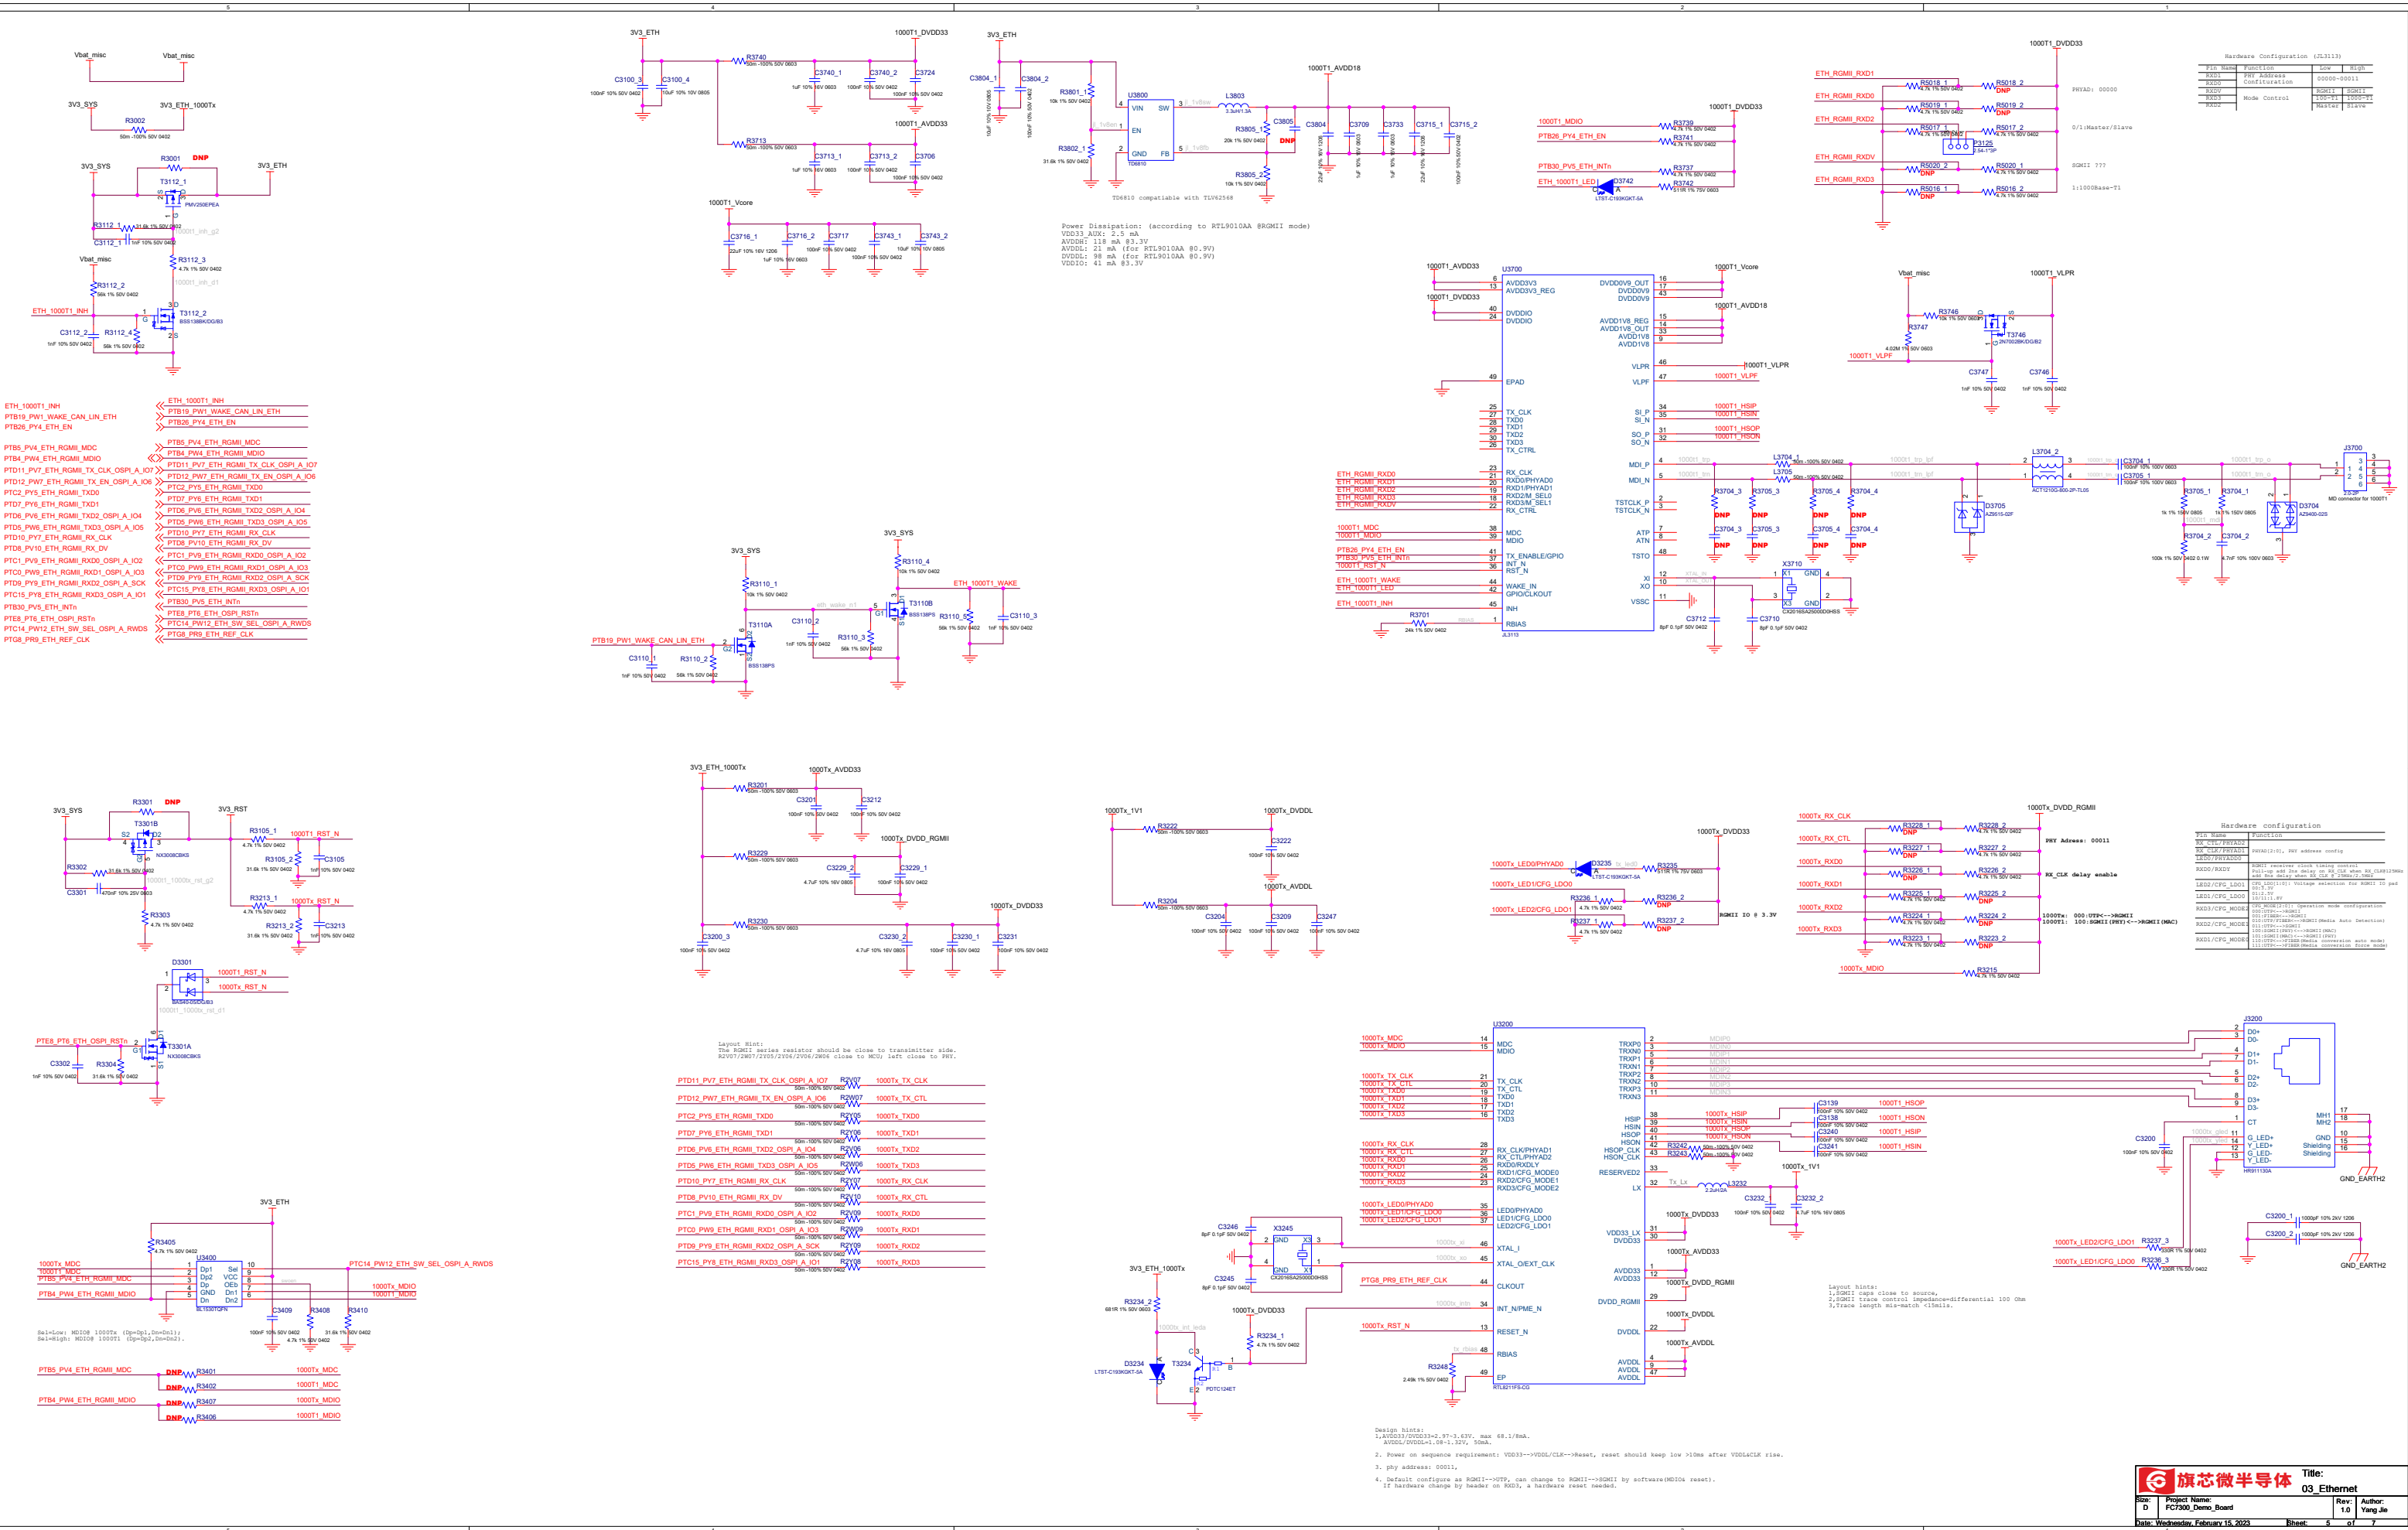

Note: 2 wakeup mode:  
mode1: system power still on, wakeup MCU.  
mode2: system power off, wakeup SBC to power on system.

### 3, MCU Wakeup Flow
