1, System Block Diagram

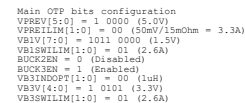

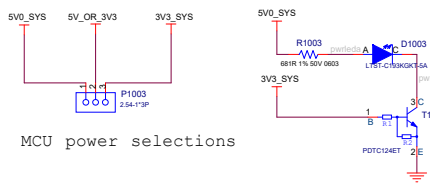

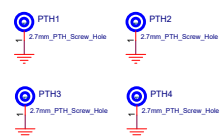

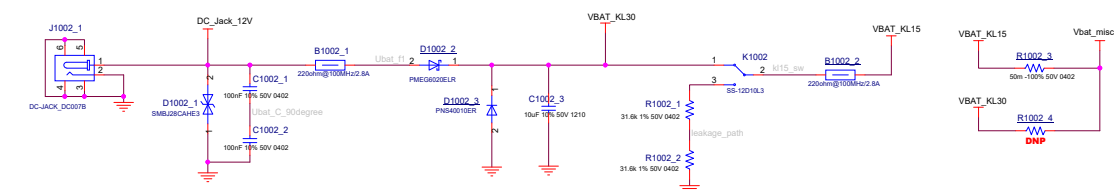

Note1: The entire power system can either from SBC or descrite Power IC, only either one will be mount.
Note2: Dotted line means alternative path. e.g. MCU V15 can either from DC-DC or NPN-LDO, only either one will be mount.
Note3: Current consumption depend on devices.

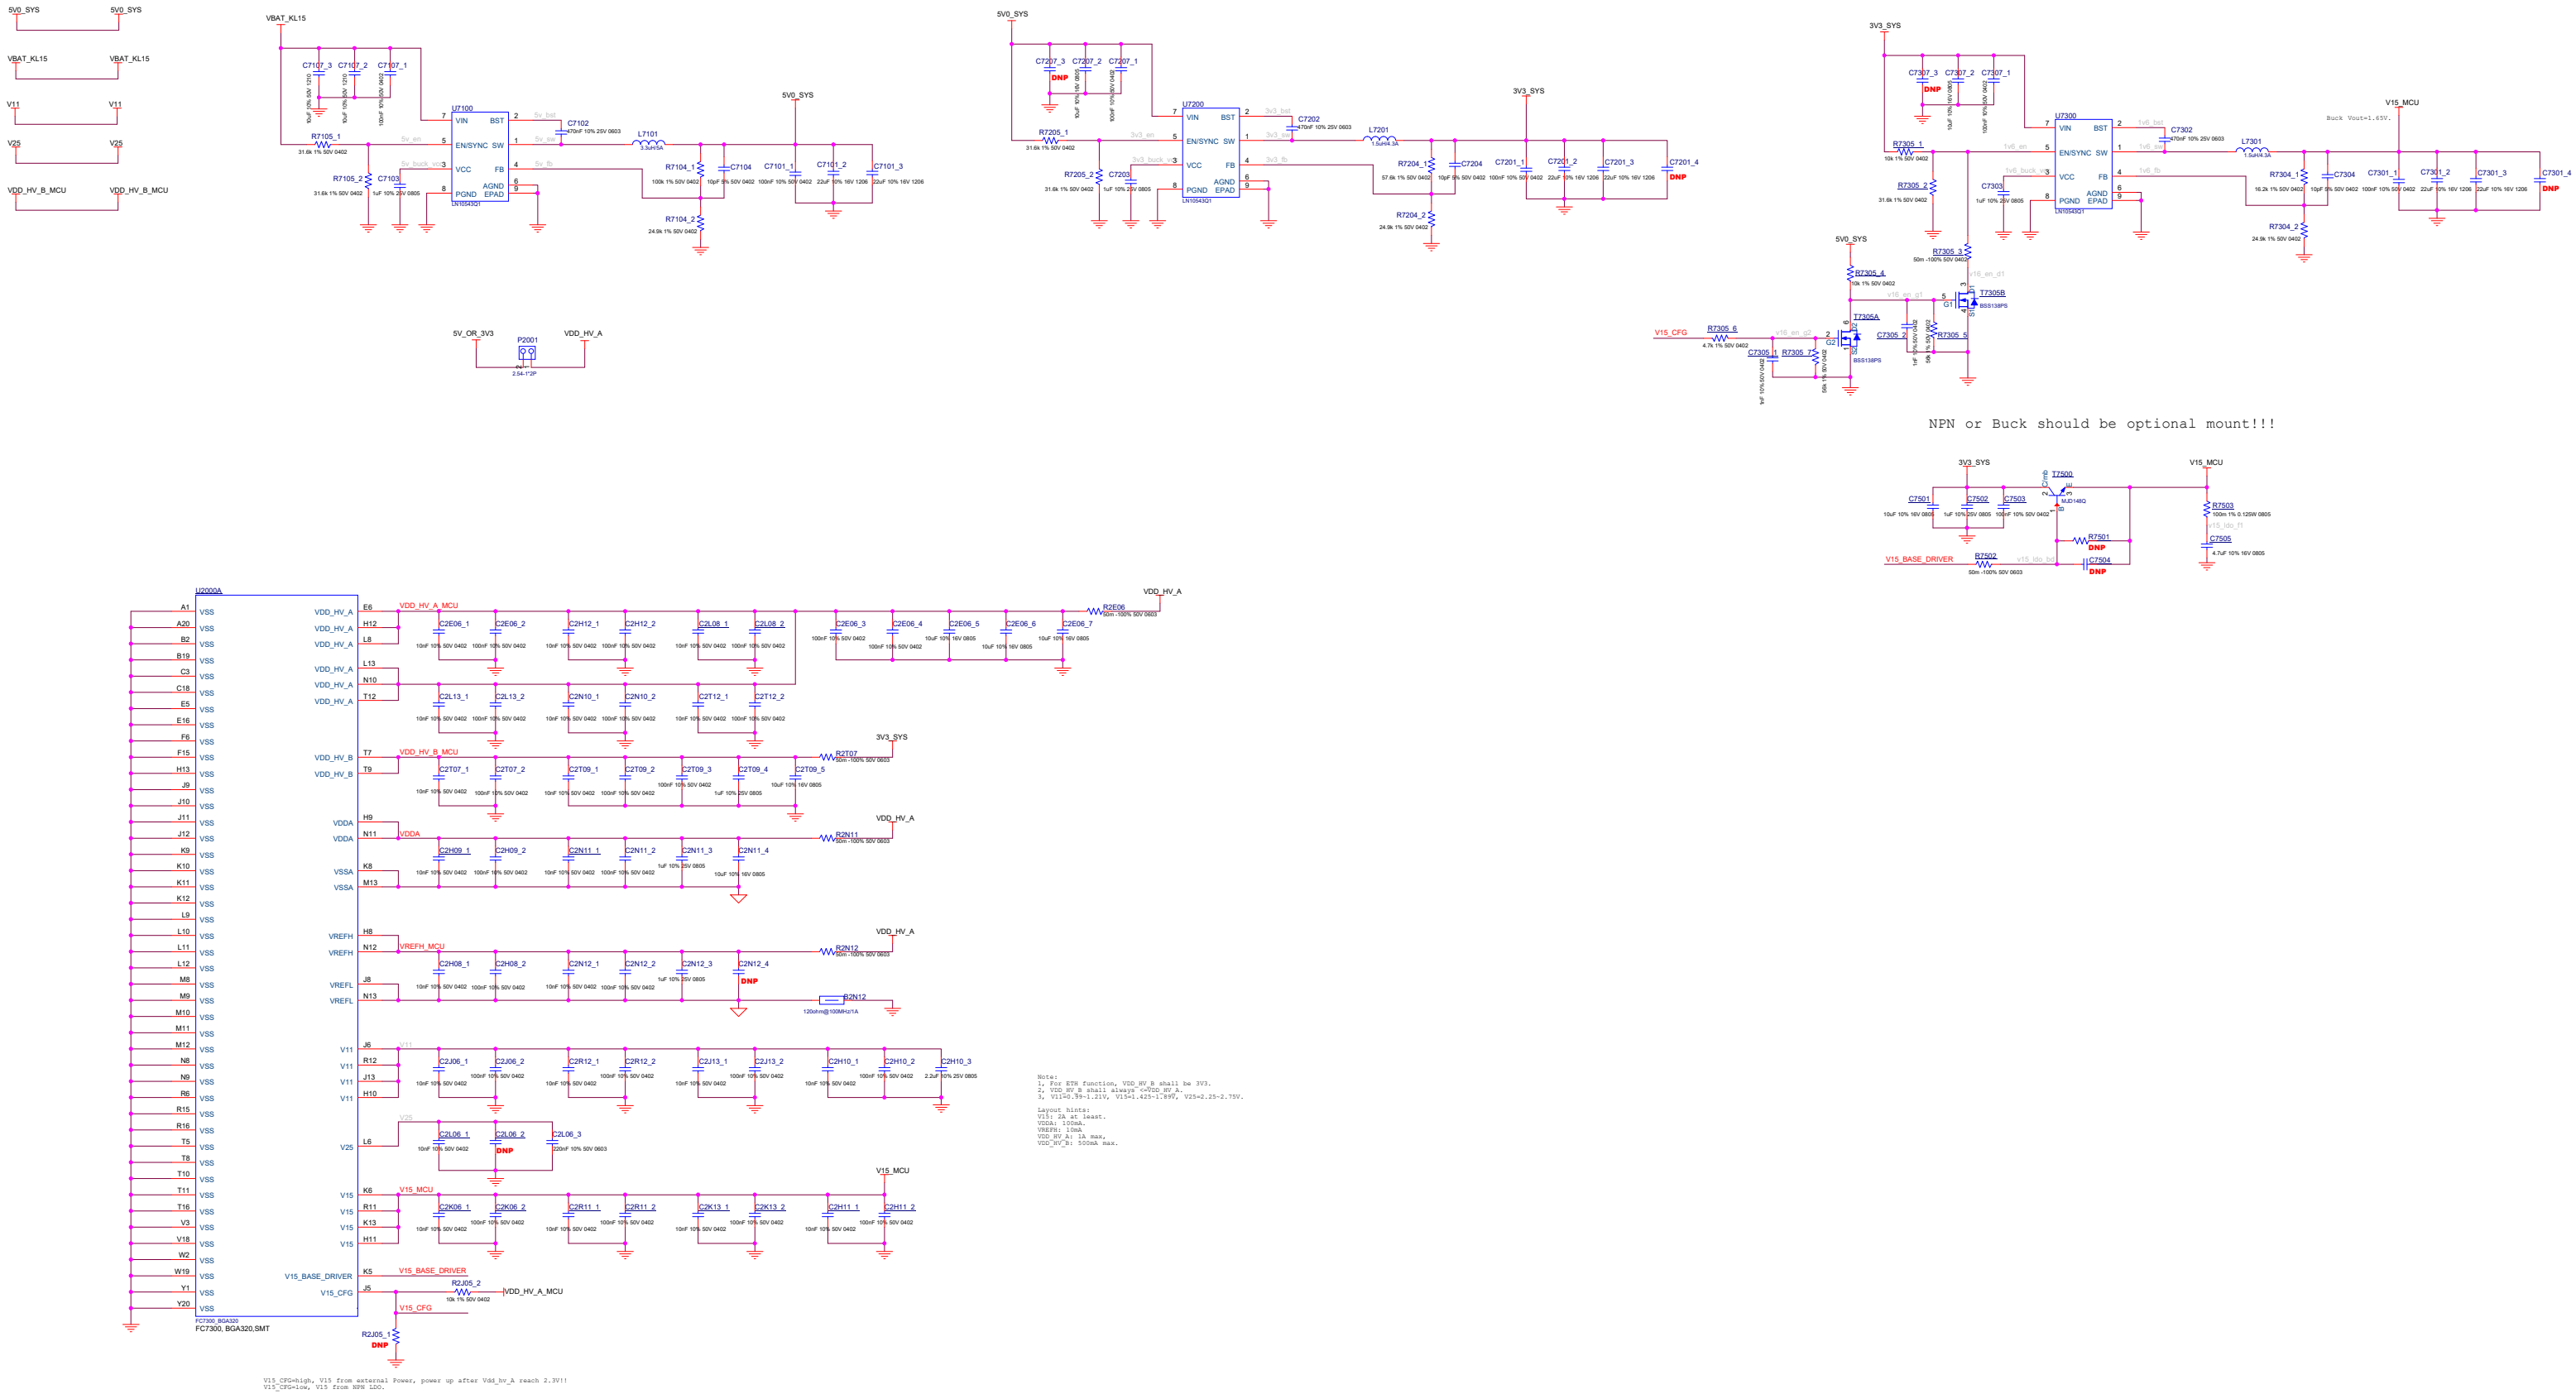

2, Power Flow Chart

Note: 2 wakeup mode:
mode1: system power still on, wakeup MCU.
mode2: system power off, wakeup SBC to power on system.

3, MCU Wakeup Flow

NPN or Buck should be optional mount!!!
